📍 Toronto, Ontario

TECHNICAL SKILLS

Languages: Python, C++, C#, Lua, HTML/CSS, JavaScript/TypeScript

Frameworks: React Native, React.js, Node.js, Express, Electron, REST APIs, GraphQL, Docker, Git

Tools: Git/GitHub, CI/CD Pipelines, Socket.js, Redux, PostgreSQL, MongoDB

Soft Skills: Collaboration, Public Speaking, Problem-Solving, Mentorship

EXPERIENCE

- **Senior Computer Instructor** Jun. 2025 – Aug. 2025
University of Toronto Scarborough *Toronto, Ontario*
 - Developed engaging coding **workshops** using **Python and Scratch**, empowering over **300 children** to acquire foundational **programming** skills and fostering early interest in computer science.
 - Implemented interactive teaching games and digital tools that increased student **participation by 40%**, fostering a deeper understanding of complex technological concepts.
- **Lead Web Developer** Jun. 2024 – Sept. 2024
SproutHacks *Waterloo, Ontario*
 - Spearheaded a responsive webapp & authentication system alongside **UI/UX** design to ship MVP/final product utilized by **100s of users** leveraging **React, Tailwind CSS, and TypeScript**
 - Integrated REST APIs & Firebase for real-time updates; was **one of two lead developers**.
- **Machine Learning Intern** July 2024 – Sept. 2024
STEM-Away *Santa Clara, California*
 - Developed **machine learning pipeline** for protein interaction prediction, cutting training time by 25% through automated preprocessing.
 - Worked with an agile team to design an **API** for ML model deployment, documenting processes for technical stakeholders.

PERSONAL PROJECTS

- **StudyQuest iOS App:** Developed a gamified learning app with an XP and leaderboard system, refining UI/UX through A/B testing. Built with **React Native, Expo, and Firebase**; implemented authentication, real-time progress tracking, and a study analytics dashboard.
- **The EcoAuditor:** Engineered an IoT-based carbon emissions tracker using an **ESP32 microcontroller and MPU6050 sensor**. Designed a **Node.js backend** for real-time data processing and built the frontend with **HTML/CSS/JavaScript** to visualize emissions and fuel consumption.

AWARDS

- GenZCanHack – Created a carbon emissions tracker using an ESP32 microcontroller and MPU6050 sensor with a **Node.js** backend. **Placed 4/20**.
- University of Toronto High School Design Competition – Solved a first-year engineering problem during the 11th grade with a dynamic team of 4. **Placed 5/30** within our division.

EDUCATION

- **Sir Wilfrid Laurier Collegiate Institute** Sept. 2022 – June 2026
Ontario Secondary School Diploma (International Baccalaureate Diploma) *Toronto, Ontario*
